Plagiarism and Collusion are methods of cheating that falls under Peraturan Akademik Universiti Malaysia Sarawak para 11: Etika Akademik

Plagiarism
Plagiarism is the presentation of work which has been copied in whole or in part from another person's work, or from any other source such as the internet, published books or periodicals without due acknowledgement given in the text.

Collusion
Collusion is the presentation of work that is the result in whole or in part of unauthorized collaboration with another person or persons.

Where there are reasonable grounds for believing that cheating has occurred, the only action that may be taken when plagiarism or collusion is detected is for the staff member not to mark the item of work and to report or refer the matter to the Dean. This may result in work being disallowed and given a fail grade or if the circumstances warrant, the matter may be referred to a Committee of inquiry for investigation. Such investigation may result in the matter being referred to the University Discipline Committee, **which** has the power to exclude a student.

1.1 The classes identified in the proposed system are :

Classes identified	• User • Coordinator • Buyer • Driver • Farmer • Profile	• Order • Produce • Report • Payment • Transport
Object oriented concepts used	• Inheritance ○ User class is the parent class (superclass) ○ The coordinator,Buyer,Driver and Farmer classes are child classes (subclass) • Polymorphism ○ The inherited method *updatePassword()* can be called on a Coordinator, Buyer, Driver or Farmer object. ○ The subclasses introduced specialized behaviour through unique methods ■ Buyer has *placeOrder()* and *viewPaymentHistory()* ■ Driver has *calculateTransportCost()* and *confirmDelivery()* ■ Farmer has *manageProfile()* and *updateProduceDetails()*
